MEDICAL DEVICE SECURITY SERVICES

PROBLEM:

Many healthcare entities struggle to identify which medical devices are active or inactive on their network. Improperly secured devices pose high risks for patient harm or an information breach. Limited staff means that many security teams are stretched too thin to properly handle medical device security, increasing the risk of information mishandling or breaches.

SOLUTION:

Meditology Services, a leading healthcare information security services firm, is providing the industry's first comprehensive end-to-end medical device security program solution. This offers health organizations a blueprint for medical device security programs incorporating industry standards, leading practices, pioneering automation and expert managed services from Meditology.

MEDICAL DEVICE SECURITY SERVICES

Meditology has setup partnerships with leading providers of automated inventory management technology to implement a strategic plan defining the people and processes required to protect medical devices. A team of experts are deployed as a managed service to better protect healthcare's life-saving devices and systems. There are flexible service levels to fit all types of health organizations looking to get better security across networked devices.

UNMATCHED MEDICAL DEVICE SECURITY EXPERTISE

Quite simply, we know healthcare like no other security provider. Let us handle your medical device security program from end-to-end.

MEDICAL DEVICE SECURITY SERVICE OPTIONS

Choose from three service levels for Medical Device Security Services:

1. Medical Device Inventory & Risk Assessment offers a budget-friendly solution to address medical device security risk assessments and response planning including:

- Medical device discovery and inventory update
- Comprehensive assessment of people, process and technology to secure medical devices
- Education of stakeholders to build support for medical device security

2. Medical Device Program Blueprint provides mid-to-long term strategy for handling medical device security risk management leveraging Meditology Services consulting and automated inventory management technology. The blueprint includes detailed risk assessments, incorporates input from all stakeholders and applies inventory automation to build a prioritized and customized plan.

3. Managed Medical Device Security Program delivers a full-service, end-to-end medical device security risk management solution utilizing Meditology Services consulting expertise and automated inventory management technology. Allows health entities to implement world class medical device program immediately with the right people, technology and processes already baked in.
